

Anurag Nepal

Statistical Data Scientist

nepalanurag72@gmail.com · (650) 270-6636 · San Francisco, CA · github.com/nepalanurag · anurag-nepal-portfolio.vercel.app · linkedin.com/in/anurag-nepal-1587a4191

PROFESSIONAL SUMMARY

M.S. in Statistical Data Science (4.0 GPA, Distinguished Graduate), B.E. in Computer Science. My thesis introduced a permutation-assisted group lasso that cut false discoveries from 53% to 1% vs. lasso baselines; I also ship production software: Android apps, web tools, and data pipelines.

WORK EXPERIENCE

Graduate Assistant	Feb 2025 – Present
San Francisco State University, San Francisco, CA	
- Thesis research on permutation-assisted group lasso for multi-modal feature selection; presented T-cell receptor findings at BBSW 2025. - Reproduced Random Forests, Boruta, and variable-importance methods from papers as validated R code.	

EDUCATION

M.S. Statistical Data Science	2024 – 2026
San Francisco State University, San Francisco, CA	
GPA 4.0/4.0; Distinguished Graduate Award; General Officer, Data Science Society.	
B.E. Computer Science & Engineering	2019 – 2023
Nitte Meenakshi Institute of Technology, Bengaluru, India	
GPA 9.34/10.0; ranked among the top 5 graduates.	

SKILLS

Languages	Python (PyTorch, TensorFlow, scikit-learn, OpenCV), R (ggplot2), SQL, Java, C/C++
Methods	Penalized regression (lasso, group lasso), causal inference (double ML), conformal prediction, Bayesian A/B testing, time-series forecasting, CNNs, RAG evaluation
Tools	Git/GitHub, Vercel, Android Studio, Tableau, SQLite

PROJECTS

Permutation-Assisted Group Lasso — M.S. Thesis	github.com/nepalanurag/thesis-findings
R	
18-scenario simulation (n=100/200, 200–400 noise features, 50 runs each): early-fusion adaptive model reached FDR 0.01 vs. 0.526 for lasso, F1 0.787, Jaccard stability 0.59; TCGA-BRCA validation: 0.68 stability, 0.948 AUC.	
COVID-19 Lung Infection Segmentation	github.com/nepalanurag/Biomedical-Imaging-Analysis
Python	
ML system detecting COVID-19 in chest CT scans; cut per-image processing time from 5 minutes to 2.	
Malaria Detection with CNN	github.com/nepalanurag/Detection-of-Malaria-Using-CNN
Python, TensorFlow	
CNN classifier for malaria parasites in blood-smear images; co-authored published research paper.	
ECG Heartbeat Classification	github.com/nepalanurag/ECG-Classification
Python	
CNN/ANN/KNN on MIT-BIH data for arrhythmia and myocardial-infarction prediction.	
Statistics-meets-AI Lab	anurag-nepal-portfolio.vercel.app/ai-lab
Python	
Double-ML causal effect of 401(k) eligibility; factorial RAG evaluation; LLM-annotator reliability; Bayesian A/B testing calculator — all with live dashboards.
